REMOVE/REWIRE

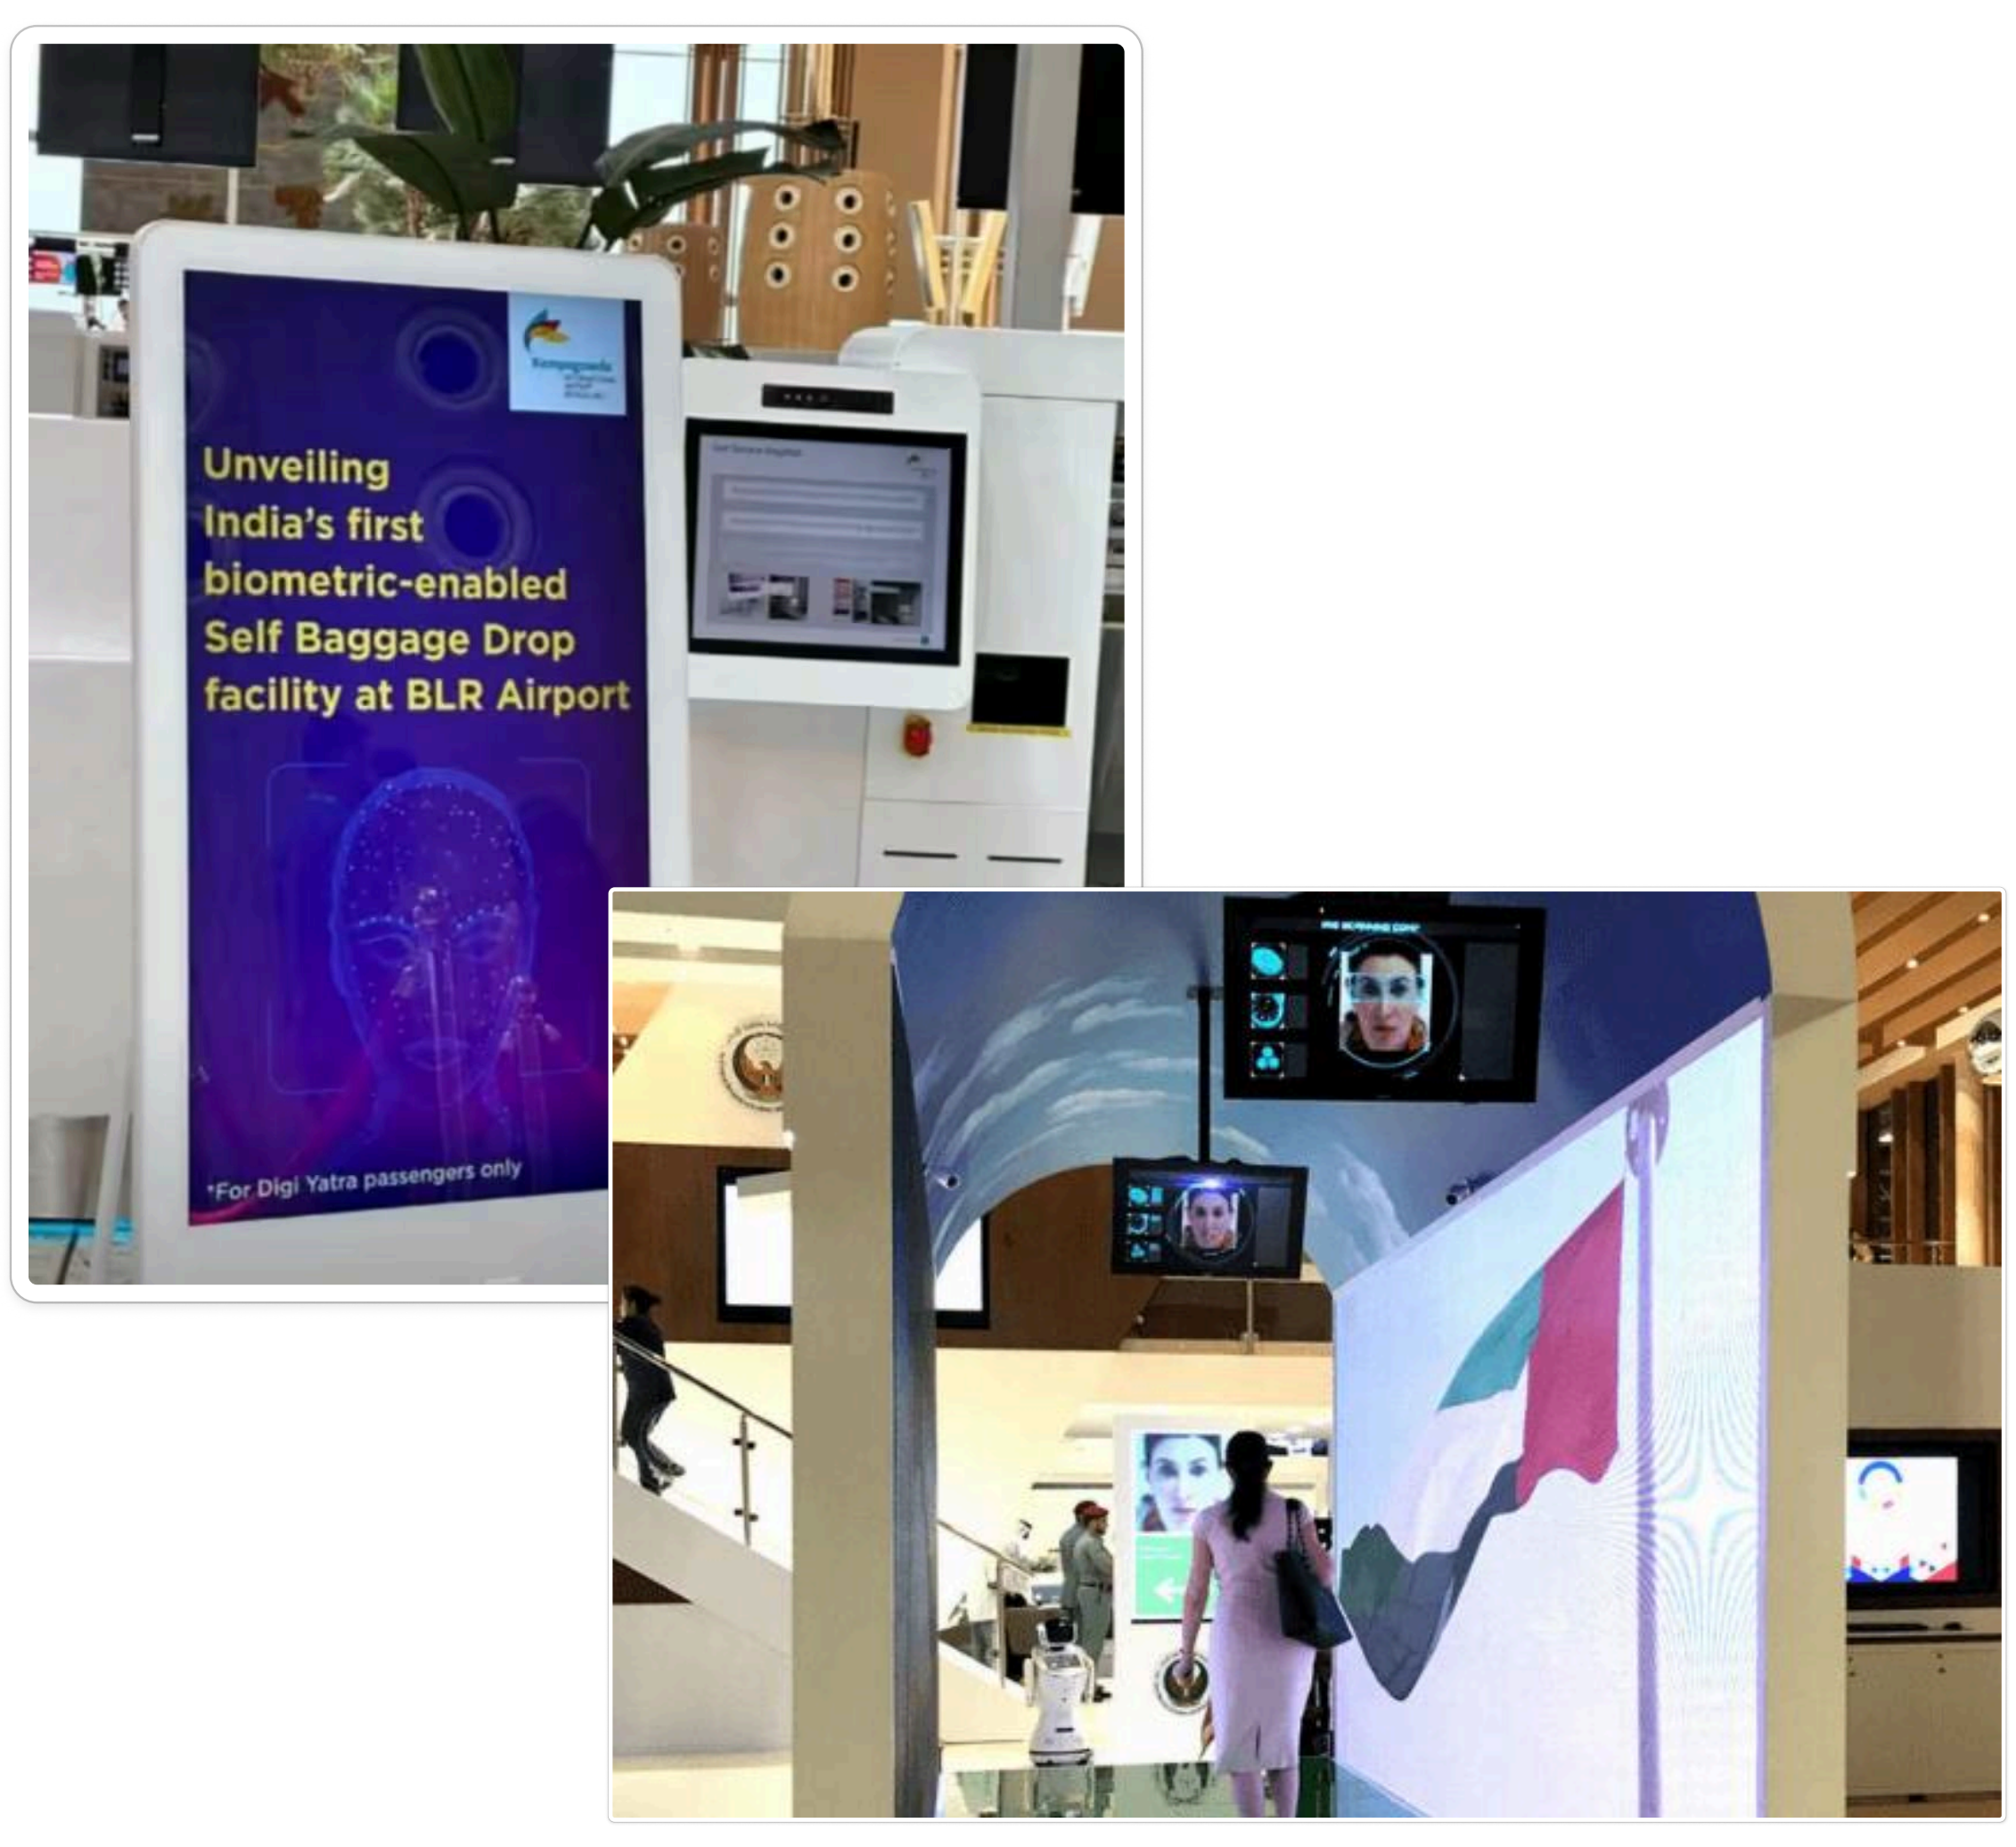
Operating models & tech that take the responsibility off the user.

ARRIVAL · CHECK IN · THE WAIT · APPROACH COUNTER · BIOMETRICS · DOCUMENT CHECK · CONFIRM INFORMATION · PHOTO TAKING · MOBILE APP SET UP · CARD APPROVAL · LEAVE EPSC

This bucket of ideas was sparked by the idea that making the user bring documents, check themselves in, or watch a screen for their queue number is actually the shifting of operating ONTO the user because MOM lacks an ability / capability (this is not an insult, it's just a mindset).

2 things we observed during desktop research:

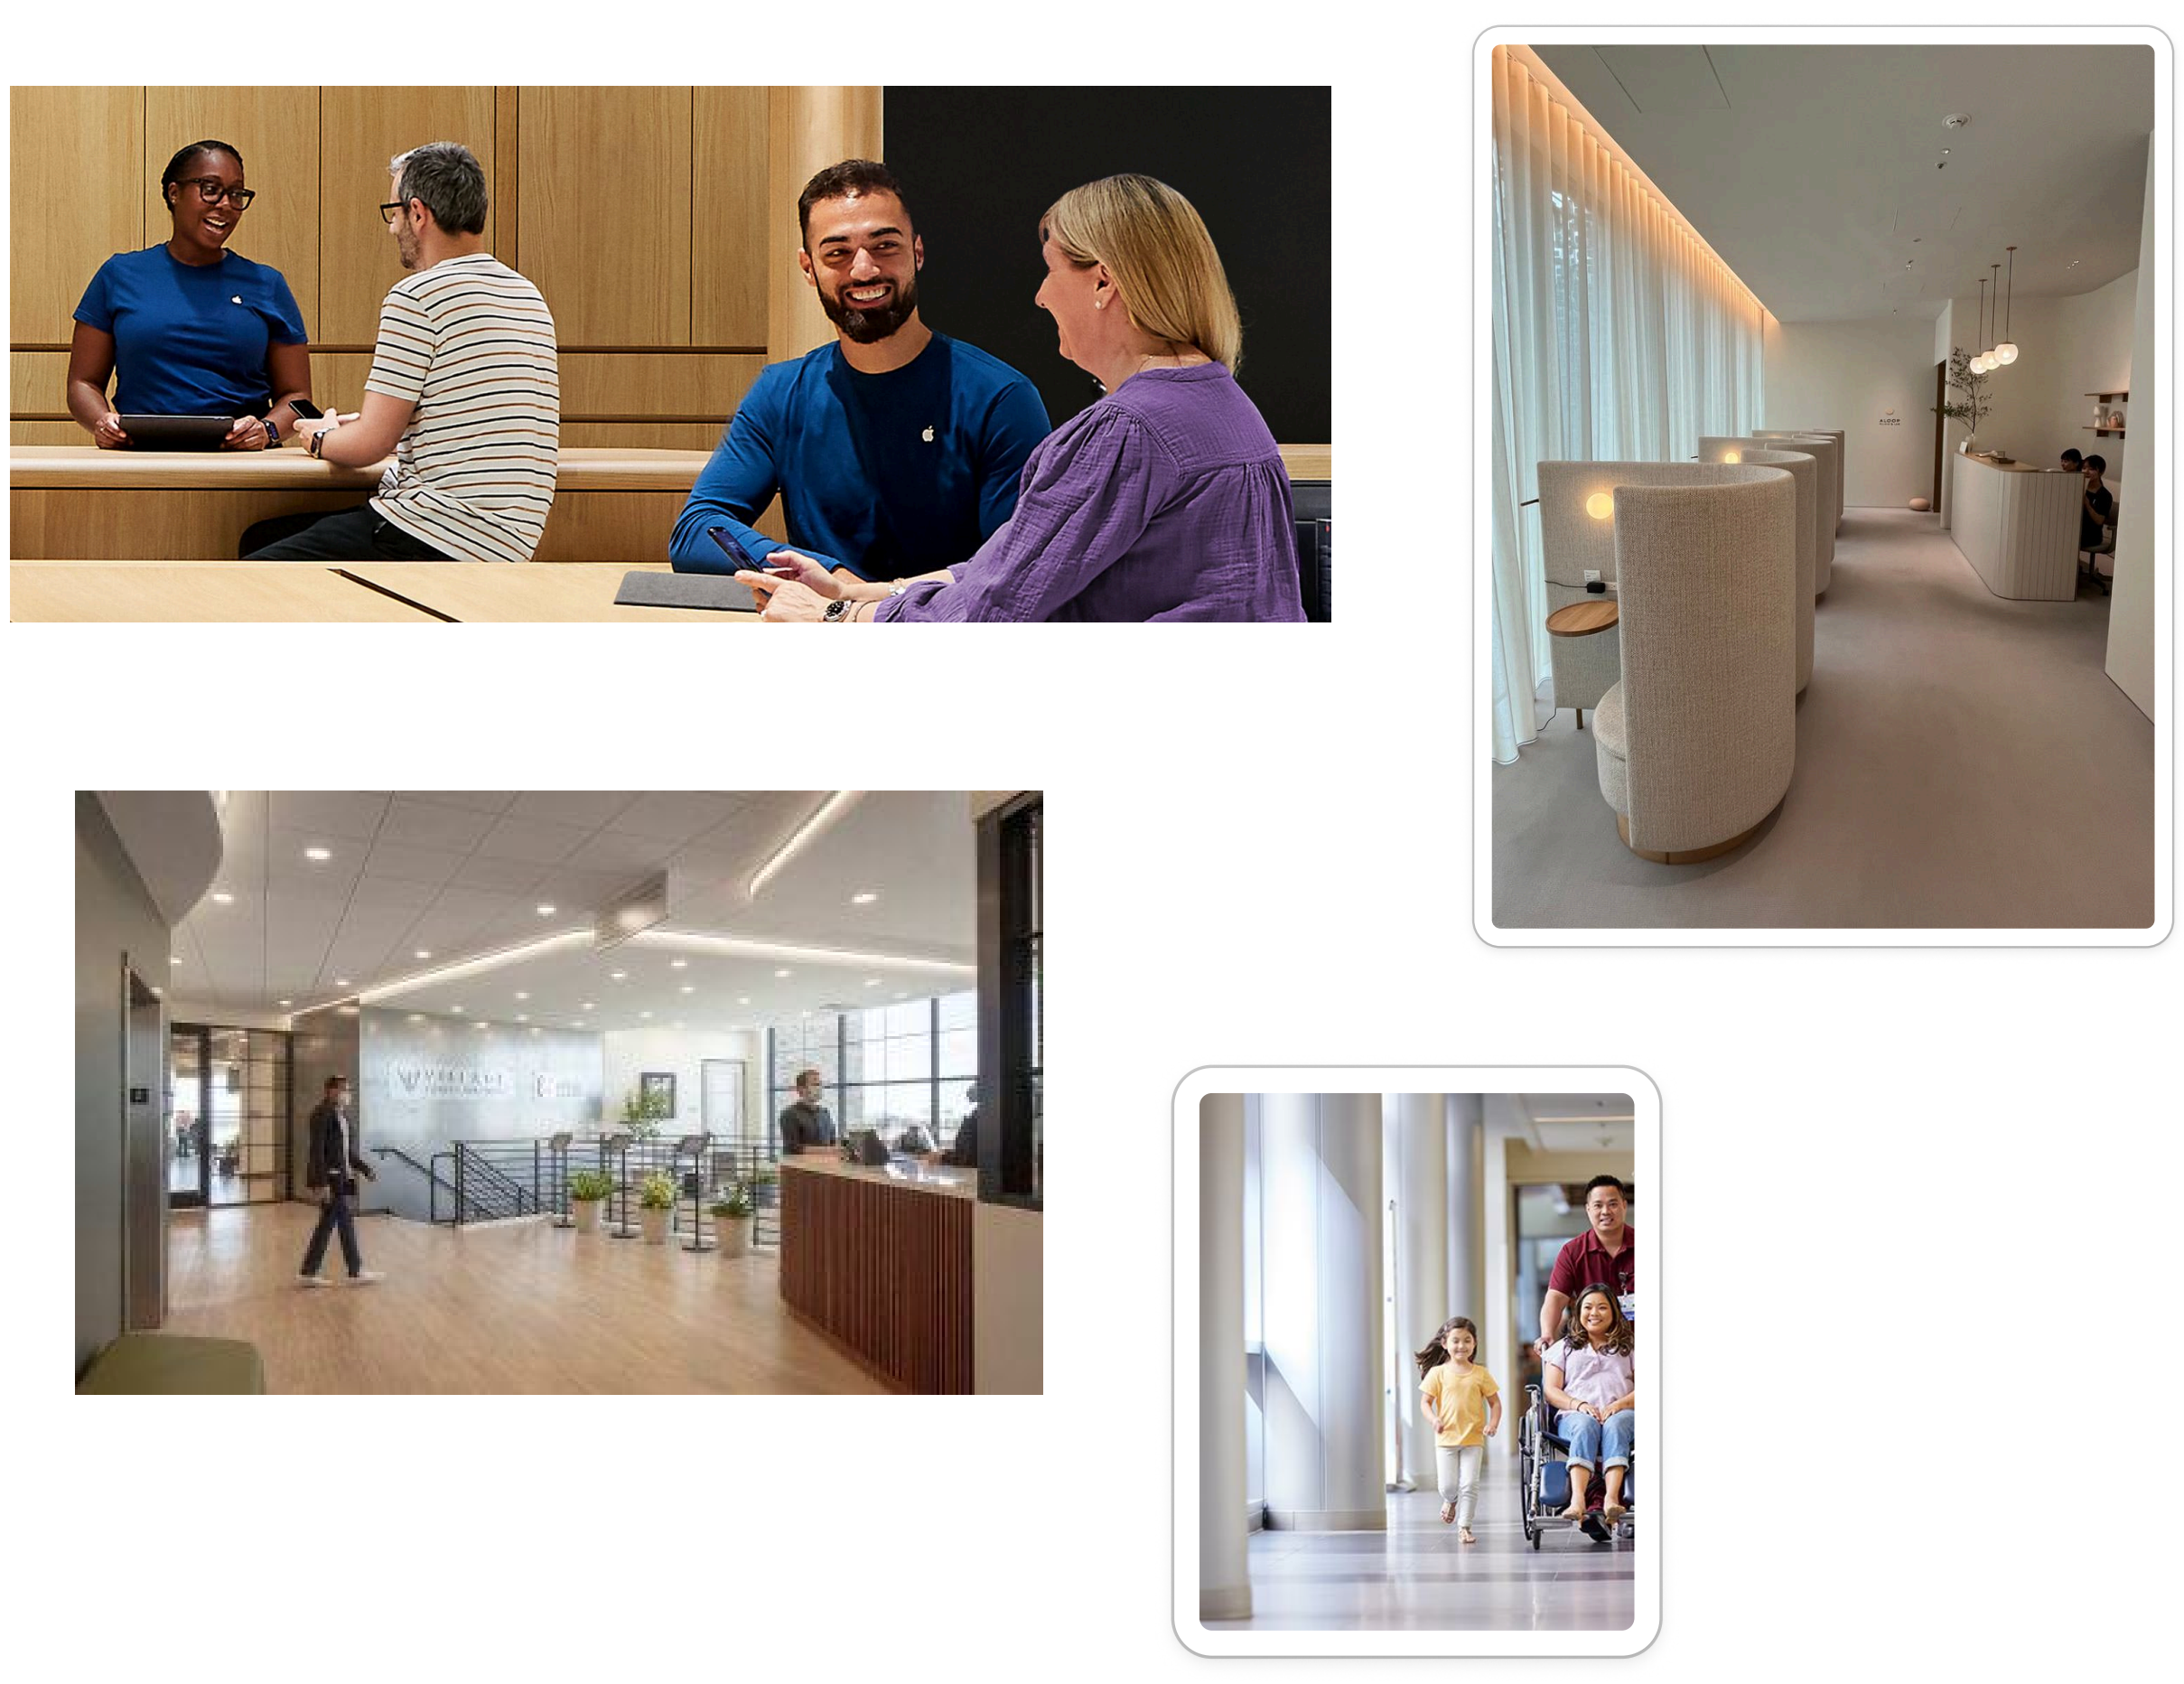
Documentless x Biometric Retrieval



Unveiling India's first biometric-enabled Self Baggage Drop facility at BLR Airport
*For Digi Yatra passengers only

In India and Dubai, facial recognition allows the user to proceed to check a bag / or through customs without showing a single physical document.

Counterless Retail Formats



In the Apple Store, you are free to float around the space and an Apple Store staff with an iPad will approach you to help you collect your order,make a return, etc.

In healthcare, waiting rooms are being eliminated by "self rooming" options.

Relevant verbatims from our interviews:

Julian:
Totally paperless would be great. We had to buy a printer (not for this EPSC visit) because we had to bring a physical copy for something.

Ling, Rebecca

David:
"Bring your documents down" ok, I brought a digital version on my phone and everyone was asking me for the physical documents/ notification letter, which I didn't print. They need to keep a copy. They didn't help me print. Surprised they couldn't

"They make it (the documents) a you problem. But they should have it - my FIN is a commmon denominator, just go look it up!"

Ling, Rebecca

Chayan:
But the process was good and efficient, I emailed them that I lost my PEP, and MOM replied with the whole process of what documents to bring to get a new card. Just not pleasant in the fact that it ended with me swiping my credit card. I knew which documents I needed to carry. I would have wanted delivery if it was possible but i had to go down to the physical EPSC.

Ling, Rebecca

Ariel:
I would love a digital document retrieval, it would be super helpful. I forgot one of the documents one time and that made the process a bit inconvenient.

Ling, Rebecca

Manu:
I expect in person for fingerprinting or picture, but the more that could be done (online) would be better. Better to not come to the center.

Reutiman, Nathan

Iker:
Since you already got my email, you can use it as an avenue to engage and educate with the holder before they even arrive in Singapore. Emails about the hawker centre, work culture etc.

Ling, Rebecca

QUESTION TO ASK:

How would it work if the customer really didn't have to do / bring / think about anything once they're there.

How would the processes have to change / the staff step up?

Imagine if future customers said this...

"The staff knew who exactly who I was and approached me when it was my turn"

"I was surprised - they pulled up all my documents based on my face"

"One little QR code stored everything I needed for the whole service"

"I brought myself to a private suite and sat down... soon after, an MOM staff came in and did the transaction"
